JAVA PROGRAMMING PROJECT PRESENTATION

Project Title: Employee Performance Evaluation and Rating System

Course: Java Mini Project

Student Name & Roll No: LEENA R [25BCS163]

Department: Computer Science

Mentor / Guide: Aravind

TECHNICAL TEAM

JAVA PROGRAMMING PROJECT PRESENTATION

INTRODUCTION

The Employee Performance Evaluation and Rating System is a software-based solution designed to assess and manage employee performance in an organization. It helps in analyzing the work efficiency of employees based on their performance scores and converting them into meaningful ratings such as Excellent, Very Good, Good, Average, and Poor.

This system simplifies the traditional manual evaluation process by automating performance calculations and ensuring fair and consistent assessment. It improves decision-making for promotions, salary increments, and training needs by providing accurate performance reports.

TECHNICAL TEAM

JAVA PROGRAMMING PROJECT PRESENTATION

OBJECTIVE

The main objective of the Employee Performance Evaluation and Rating System is to develop an efficient and automated method for evaluating employee performance in an organization. The system aims to simplify the process of performance assessment by converting numerical performance scores into meaningful ratings.

It helps in reducing manual effort, saving time, and ensuring fair and unbiased evaluation of employees. The system also supports management in identifying high-performing employees, improving productivity, and making better decisions regarding promotions, rewards, and training requirements.

JAVA PROGRAMMING PROJECT PRESENTATION

PROBLEM STATEMENT

1.Employee performance evaluation is often done manually in many organizations.

2.Manual evaluation is time-consuming and inefficient.

3.There is a high chance of human errors and bias in rating employees.

4.Lack of standardization leads to inconsistent performance results.

5.It becomes difficult to maintain and analyze large employee data.

6.Decision-making for promotions and rewards is not always accurate.

7.There is a need for an automated and reliable system to evaluate performance fairly and quickly.

SYSTEM REQUIREMENTS

Hardware Requirements:

- Processor: Intel i3 or higher
- RAM: 4 GB minimum
- Storage: 500 MB free space

Software Requirements:

- OS: Windows / Linux
- Compiler: GCC / Turbo C / Code::Blocks / Dev C++

TECHNICAL TEAM

JAVA PROGRAMMING PROJECT PRESENTATION

SYSTEM DESIGN

START
↓
Enter number of employees
↓
Enter employee details (ID, Name, Score)
↓
Calculate performance rating
↓
Store employee data
↓
Display final report (ID, Name, Score, Rating)
↓
END

TECHNICAL TEAM

JAVA PROGRAMMING PROJECT PRESENTATION

MODULE DESCRIPTION

Input Module: Takes employee details such as ID, Name, and Performance Score.
Processing Module: Calculates performance rating based on the score.
Evaluation Module: Assigns ratings like Excellent, Good, Average, etc.
Storage Module: Stores employee data temporarily using objects/arrays.
Output Module: Displays final employee report with ratings.

TECHNICAL TEAM

JAVA PROGRAMMING PROJECT PRESENTATION

ALGORITHM

1. Start
2. Input number of employees (n)
3. Repeat steps 4–7 for each employee
4. Input Employee ID, Name, and Performance Score
5. Check Performance Score:
   - If ≥ 90 → Excellent
   - If ≥ 75 → Very Good
   - If ≥ 60 → Good
   - If ≥ 40 → Average
   - Else → Poor
6. Store employee details and rating
7. End loop
8. Display all employee details with ratings
9. Stop

TECHNICAL TEAM

JAVA PROGRAMMING PROJECT PRESENTATION

IMPLEMENTATION

- The system is implemented using **Java programming language**.
- An **Employee class** is created to store employee details (ID, Name, Performance Score).
- A method is used to **calculate performance rating** based on score.
- Multiple employee records are handled using an **array of objects**.
- The program takes input from the user using the **Scanner class**.
- After processing, the system displays a **final report with ratings** for each employee.
- The implementation follows a simple **console-based approach** for easy execution.

JAVA PROGRAMMING PROJECT PRESENTATION

OUTPUT AND INPUT SCREEN

INPUT SCREEN

```
Enter number of employees: 3

Enter details for Employee 1
  Enter ID: 101
  Enter Name: Ravi
  Enter Performance Score (0-100): 85

Enter details for Employee 2
  Enter ID: 102
  Enter Name: Anita
  Enter Performance Score (0-100): 72

Enter details for Employee 3
  Enter ID: 103
  Enter Name: John
  Enter Performance Score (0-100): 45
```

OUTPUT SCREEN

```
========== FINAL REPORT ==========
----- Employee Details -----

ID: 101
Name: Ravi
Performance Score: 85
Rating: Very Good

ID: 102
Name: Anita
Performance Score: 72
Rating: Good

ID: 103
Name: John
Performance Score: 45
Rating: Average
```

JAVA PROGRAMMING PROJECT PRESENTATION

RESULTS & DISCUSSION

The Employee Performance Evaluation and Rating System successfully evaluates employee performance based on their input scores and assigns appropriate ratings such as Excellent, Very Good, Good, Average, and Poor. The system processes multiple employee records and displays the final results in a clear and structured format.

The results show that the system works accurately in converting numerical performance scores into meaningful ratings. It reduces manual effort and ensures fair and consistent evaluation of employees.

The discussion highlights that this system improves efficiency, saves time, and minimizes human errors compared to traditional manual evaluation methods. It also helps management in easily identifying employee performance levels for decision-making processes such as promotions and training.

JAVA PROGRAMMING PROJECT PRESENTATION

CONCLUSION & FUTURE ENHANCEMENT

The Employee Performance Evaluation and Rating System successfully automates the process of evaluating employee performance based on predefined criteria. It provides accurate and consistent ratings, reduces manual effort, and improves the efficiency of performance management. The system is simple, reliable, and easy to use for basic employee evaluation tasks.Future Enhancements:

- Can be upgraded with a graphical user interface (GUI) using Java Swing or JavaFX
- Integration with a database (MySQL) for permanent data storage
- Web-based application using HTML, CSS, and Java (Servlets/JSP)
- Advanced analytics and graphical performance reports
- Login system for admin and employees for better security
- Export reports in PDF or Excel format

Acknowledgement

I would like to express my sincere thanks to my faculty and institution for giving me the opportunity to complete this project. I also thank my friends and family for their support and encouragement. Finally, I am grateful to all online resources that helped in understanding and developing this project successfully.

THANK YOU
